Waveshare 7.5" e-Paper — actual size

alternate — flight card

Print at 100%. In the macOS print dialog: Scale 100%, not "Scale to Fit".

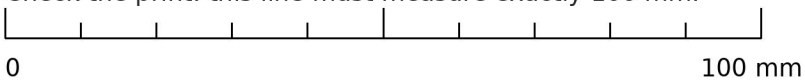

Solid line — the active area, 163.2 x 97.9 mm. That is the whole visible image: 800 x 480 pixels, about 125 per inch.

Dashed line — the glass, 170.2 x 111.2 mm. Cut the mat opening to the solid line; the glass hides behind it.

Cut along the dashed line, tape it where the frame will hang, and look at it from where you normally sit.

If the flight number is not readable from the sofa, no panel will fix that — change the layout instead.

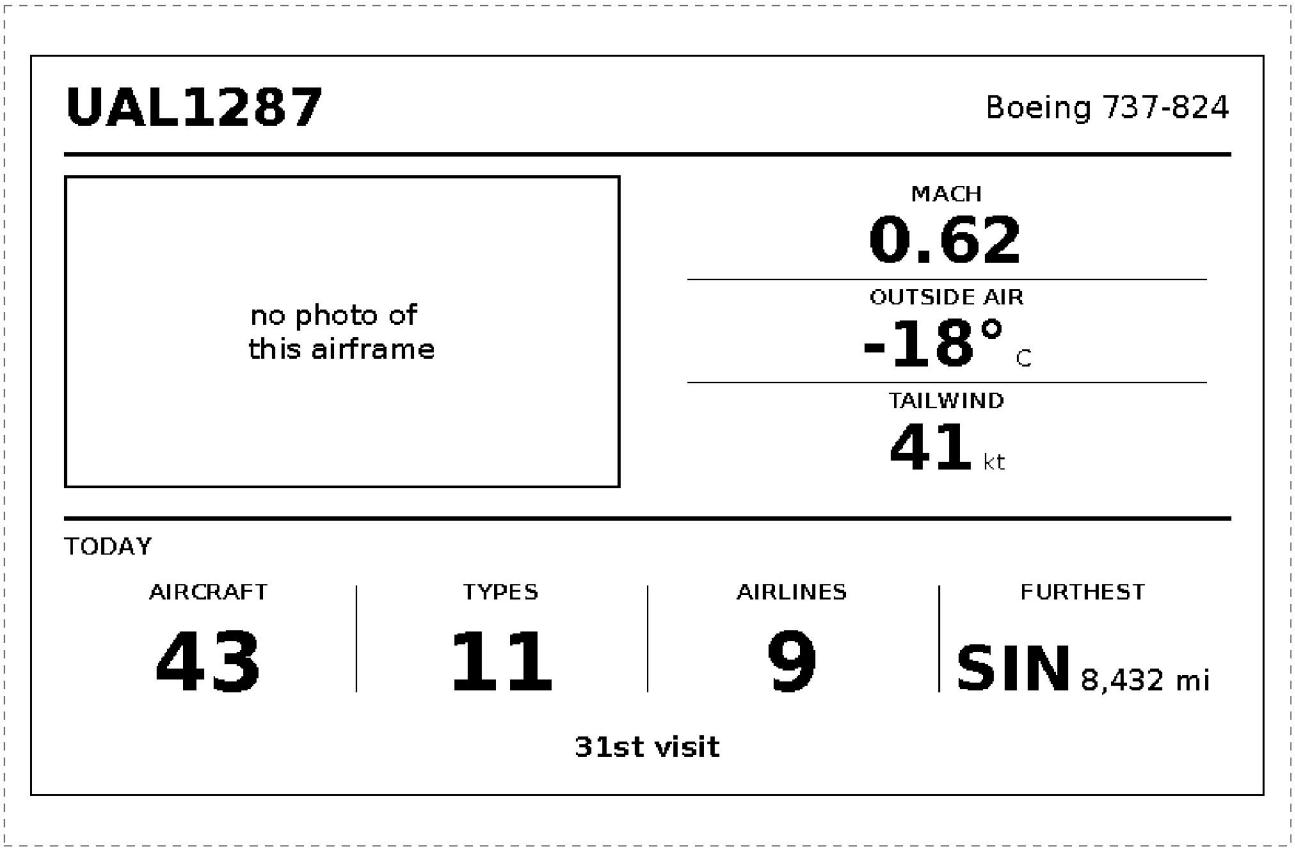

Check the print: this line must measure exactly 100 mm.
